

Laptop Carrier™

The Laptop Carrier™ stores and charges laptops, tablet PCs, and other electronic devices with capacities of 20, 26, and 32. It deters theft and helps to ensure the security of stored equipment as well as preventing access to IT configurations in the rear of the cart.

- Smaller footprint (compared to traditional hinged doors) translucent tambour door allows for visual inventory of stored items and access to contents while limiting admittance to IT configurations in the rear of the cart
- Ventilation design allows for natural convective airflow to aid in cooling
- UL listed Timer Power Center includes an on/off switch, circuit breaker protection, and 96 cycle/15 minute setting intervals to provide charging for the cart
- Rubber bumpers protect cart as well as school property
- Durable laminate top provides a smooth worksurface unobstructed by a handle or metal lip
- Grommet hole on top surface can be replaced with an optional Pop Up Power Center to power electronics on top of the cart
- Patented Power Management Dividers provide a cord management solution by wrapping the cords around the divider and are removable for the storage of other devices when not all laptop slots are in use
- Handle can be mounted to either side and does not interfere with the work area
- Metal hinged doors can be added to create a fully enclosed steel cabinet, with an electronic code lock included
